## Web Developer

### Professional Goal

I seek challenging opportunities as a Full Stack Developer, where I can apply my passion for technology and my comprehensive experience to contribute significantly to innovative projects. I have expertise in development on both the client and server sides, using modern technologies such as JavaScript (Node.js, React), HTML5, CSS3 and related frameworks. My goal is to create efficient and scalable solutions, ensuring an exceptional user experience.

### Professional Resume

I am a tech lover and a curious person who is always in search of new things to learn. I like to talk to people and understand their needs and help them in the best way possible. I am graduated in International Business at Universidade do Vale do Rio dos Sinos (UNISINOS), and now I am studying System Development and Analysis to improve more and more in this area. I worked for 5 years in a logistics and transport company in different areas, being able to improve a lot of skills. Afterwards I opened my own café in Porto Alegre, which was an enriching experience to develop my communication skills, problem-solving, etc. I'm looking forward to collaborating with a company that I identify with and be able to grow professionally in this area that I like so much.

## Professional Experience

- **2019-2023**  
Poza Cafe | Porto Alegre, Brazil  
**Co-owner / Barista / Attendant**
  - I fell in love with Specialty Coffee and decided to open my own café. There I did a little bit of everything, focusing on the administration and customer experience, attending 50-100 clients a day.
  - Dealing with clients and understanding their needs is something I really like and I was already used to it from my previous experiences.
  - I could also improve a lot of skills I already had, such as organization, management, finances, problem-solving, and I grew up a lot professionally with this experience.
- **2013-2018**  
Kuehne + Nagel | Porto Alegre, Brazil  
**Trainee / Administrative Assistant / Transport Analyst**
  - At Kuehne + Nagel I started in 2013 as a trainee in the tariff sector. In 2014 I was hired as an administrative assistant and I had closer communication with inside customers.
  - In 2015 I was in charge of the cargo insurance area and started being in contact with outside customers as well.
  - I was also responsible for the customer support when needed to activate the cargo insurance. That part was very delicate because I had to bring the bad news about the damaged cargo, so it required a good communication skill and empathy. I had to deal with problem solving and monthly reports.
  - In 2017 I was promoted to Road Transport Analyst and started working at the Mercosur team, with import and export transport. I was responsible for constant follow-up with the customers about their shipment status, from the pickup arrangement to the final delivery.

## Project - Pokémon Page (React.js)

- Repository link: <https://github.com/julialimp/pokemon-project>
- Web-page link: <https://pokemon-api-80z8.onrender.com/>

Project built with React and styled-components, using public API PokeAPI. Each pokemon component is clickable and should direct to an internal page with the pokemon details.
