# Julia Limp

## Software Developer

Tech lover who is always in search of new things to learn. I am graduated in International Business at Universidade do Vale do Rio dos Sinos (UNISINOS), and I worked for 5 years in a logistics and transport company, called Kuehne+Nagel. Afterwards I opened my own café in Porto Alegre, coffee is also a great passion I have. I'm a curious person and currently studying frontend and backend languages to improve my skills and knowledge in the area.

I'm looking forward to collaborating on a company that I identify with and be able to grow professionally in this area that I like so much.

## Experience

### 2019-2023

Poza Cafe | Porto Alegre, Brazil

#### Co-owner

I worked at Cafe Republica for one year (from 2018 to 2019) gaining experience and I fell in love with Specialty Coffee. Then I decided to open my own café, where I could improve a lot of skills I already had, such as organization, management, finances, problem-solving, etc. I could grow up a lot professionally with this experience, but the time came where I realized this cycle had come to an end and change careers.

### 2013-2018

Kuehne + Nagel | Porto Alegre, Brazil

#### Trainee / Administrative Assistant / Transport Analyst

At Kuehne + Nagel I started in 2013 as a trainee in the tariff sector. I was responsible for registering the freight negotiation values in the system. Then, in 2014 I was hired as an administrative assistant, still in the same area.

Later, in 2015, besides the tariff sector I started also being responsible for the cargo insurance, then I had to handle both tasks. When working with insurance, I had to contact the insurance company in case of damaged cargo and also contact the clients to let them know about the situation. I dealt with both internal and external clients and had to deal with problem solving and monthly reports.

In 2017 I was promoted to Road Transport Analyst and started working at the Mercosur team, responsible for the issuance of road transport bill, shipment arrangement and follow-up until it was delivered.

### 2012-2013

Zanatta Seguros | Canoas, Brazil

#### Trainee / Administrative Assistant

As a trainee, I was responsible for new customer's insurance quotation. When I was contracted as an assistant I was responsible for the renovation sector, where I distributed the proposals to the team and also did some quotations next to the expire date of the customer's insurance and then passed them on to the sales team.

## Online Courses

### Programming Logics

Udemy - 30,5 hours

Initial course to learn the basics of algorithms and programming logics.

Languages used: C, C#, C++, Python and Java.

### DevQuest

Dev em Dobro

80h frontend + 20h backend

Learning how to program from scratch.

Learned how to write HTML, CSS. Built projects using React app and SPA, context API Redux, JavaScript and TypeScript. Learned about SQL (used PostgreSQL), Node and Express.
